9. Briefly describe the waste management practices adopted in your establishments. Describe the strategy adopted by your company to reduce usage of hazardous and toxic chemicals in your products and processes and the practices adopted to manage such wastes.

The plastic waste (packaging and other type) generated from our operations is collected, segregated at source and sent to authorised recyclers by following all applicable local regulations. E-waste generated from our operations is collected and transferred to authorised recyclers/dismantling agencies by following all applicable local regulations. Hazardous & Other Waste, most of the waste is Co-processed as alternative fuel instead of incineration which shall cutdown the incinerated ash sent for Landfill. Organic/distillation bottom residues which possess calorific value are sent to cement industries as alternate fuel in the kilns. Inorganic solid wastes are disposed to TSDF (An authorised Govt. secure land fill) and or to authorised re-processor.

~85% of our hazardous waste is sent to cement industries and recyclers for co-processing and recycling. The remaining ~15% of hazardous waste is sent to landfilling and incineration. Other non-hazardous waste such as glass, MS scrap, wood waste, boiler ash etc. is sent to recyclers, cement industries for co-processing or to brick manufacturers.

We treat all our waste as a value stream and 3R's strategy is effectively implementing to reduce its impact on Environment. We reduce waste through technological interventions and by implementing green chemistry principles. Ongoing initiatives increasing usage time cycles, segregation of waste at point of generation, process optimisation, packaging optimisation/ changes in packaging types, multistage scrubbers etc. We have shifted to jumbo bags from small size packaging, getting RMs in bulk tankers instead of in plastic drums.
